## DETAILED ACTION

### *Drawings*

1. The drawings were received on May 3, 2004. These drawings are acceptable.

### *Claim Objections*

2. Claim 72 is objected to because of the following informalities: in lines 2 and 5, "compound" should be inserted between "semiconductor" and "regions", otherwise it appears as though a metal semiconductor is being claimed, which is not known to exist since metals do not exhibit semiconductive properties. Appropriate correction is required.

### *Claim Rejections - 35 USC § 103*

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 72 is rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent No. 5,159,416 to Kudoh in view of US patent No. 4,521,446 to Coleman, Jr. et al.

Kudoh teaches a field effect transistor (Fig. 9, for example) comprising:

a metal layer atop a substrate (10), said metal layer comprising metal-semiconductor compound regions (15,16) forming source/drain regions;  
a dielectric layer (98) on the metal-semiconductor compound regions; and  
a conductive gate layer.

Kudoh does not teach a locally reacted region, on which the gate is disposed, wherein the locally reacted region is adjacent the metal-semiconductor compound regions. Coleman, Jr. et al. teaches a gate dielectric layer comprising  $\text{TiO}_2$ . It would have been obvious to one of ordinary skill in the art to incorporate the  $\text{TiO}_2$  layer taught by Coleman, Jr. et al. into the device taught by Kudoh, since it is desirable to increase yield in device fabrication (See Coleman, Jr. et al., Col.1, lines 25-35).

Additionally, the requirement of the gate dielectric layer being locally reacted is considered a product-by-process limitation. This is considered a product-by-process limitation. "Even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." In re Thorpe, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985).

#### ***Allowable Subject Matter***

5. Claims 30, 33 and 65 – 71 are allowed.

#### ***Conclusion***

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not

Art Unit: 2811

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
